Feature Settings
There are three Settings—Bread, Raisin Bread and Rise Setting.
- **Bread** Setting is used when you want the bread maker to knead, rise and bake a loaf of bread.
- **Raisin Bread** Setting is used when you want the bread maker to knead, rise and bake a loaf of raisin, walnut or egg bread.
- **Rise** Setting is used when making bread dough for rolls which are shaped before baking in your conventional oven.

Timer
A special feature of the **Bread** setting is the timer. The timer can be set from 4 to 13 hours in 10 minute intervals using the ▼ and ▲ buttons. When the timer reaches [0], the bread is done.

Fresh milk and vegetable purees are not recommended when using the timer to delay the start of the kneading, rising and baking processes, because they may spoil while sitting in the bread pan.

The timer cannot be used for **Raisin bread** or **Rise** setting.

Measuring spoon
The measuring spoon included holds 1 small-spoon, 1 medium-spoon and 1 large-spoon. Accurate measurements are essential to baking delicious bread.

Capacity of flour
2 cups (8.8 oz)
When baking bread containing wheat germ, whole wheat, etc., measure the combined amounts.

Yeast
Use regular dry yeast which does not need preliminary fermentation. Pour water into the bread pan, add the flour and the other ingredients, then place the dry yeast on top of the dry flour—Do not mix.

After opening a package, store the yeast in the freezer. Use the package as quickly as possible after opening a package.

Substituting dry milk for fresh milk
One large-spoon of dry milk corresponds to ¼ cup of fresh milk.
Reduce the amount of water in proportion to the amount of fresh milk added.
Fresh milk is not recommended when using the timer to delay the start of the kneading, rising and baking processes.
• BAKING HOMEMADE BREAD WITH THE BREAD MAKER •

1. **Bread setting**
   Every step from pre-kneading to finishing is done automatically. The timer can be set from 4 to 13 hours.

2. **Raisin Bread setting**
   Every step from pre-kneading to finishing is done automatically the same as Bread setting. After about 20 minutes from the start and 4 minutes before the kneading is finished, unit buzzes 5 times to tell you to add the raisins. Open the lid and sprinkle raisins quickly and evenly over the dough. Opening the lid at this time will not stop the kneading, so be careful!
   - The timer can not be used for Raisin Bread setting.

3. **Rise setting**
   Every step from pre-kneading to finishing is done automatically. After the first rising, the buzzer will sound telling you to take the dough out.
   - The timer can not be used for Rise setting.

After the first rise, the dough is shaped and allowed to rise and the bread is baked in conventional oven according to recipe direction.

**<Pre-knead, knead>**
All the ingredients are kneaded together. The purpose of kneading is to form gluten.

**<Rest>**
Resting makes the dough more elastic.

The dough is kept at a temperature which easily activates the yeast. The purpose is to achieve a matured dough.

**<Gas squeeze out>**
The gas trapped in the dough is squeezed out to make a better dough.

**<Second rise>**
This is the final rising of the dough.

**<Bake>**
The rising of the dough is completed and the dough is transformed into bread through the baking process.

**<Finish>**
The bread is very hot after baking, so the automatic cool down feature cools it down and keeps bread from being soggy or moist inside.
The bread maker knows all the tricks of bread making. Everything from kneading to finishing is automatic. All you have to do is put in the ingredients and press the button.

You can have a delicious fresh loaf with a crisp golden crust and fluffy texture inside in less than 4 hours.
